

Plant Name	Scientific	Common	Family
------------	------------	--------	--------

<i>Lonicera reticulata</i>		KINTZLEY'S GHOST® Honeysuckle	Caprifoliaceae
----------------------------	--	----------------------------------	----------------

Propagation Method	Native To
--------------------	-----------

Cuttings	Mid-Western U.S. Cultivated
----------	-----------------------------

Treatments (Suggested procedures)

Cuttings should be taken from non-flowering stems that are still pliable. Cuttings should have at least one node above the soil and one node below. Treat cuttings with a 1:10 liquid rooting compound and stick in a 1:3 peat:perlite and place under intermittent mist for up to 3 weeks.

Collection Timing and Strategies

Cultural Information

Greenhouse conditions

Grow plants on the dry side and shear regularly to promote a well branched plant. This is a vine and needs a trellis to support it.

Garden conditions

Plant in full sun and in a well drained soil that receives regular watering. Give the plant something to grow on, Either a wall, fence, trellis etc.

Other expert Advice

Keep water off of the foliage to prevent washing off the waxy cutin layer that gives plants their color.
