

<b>Plant Name</b>	<b>Scientific</b>	<b>Common</b>	<b>Family</b>
-------------------	-------------------	---------------	---------------

<i>Phlomis cashmeriana</i>		Cashmere Sage	Lamiaceae
----------------------------	--	---------------	-----------

<b>Propagation Method</b>	<b>Native to</b>
---------------------------	------------------

Seed	Afghanistan, Pakistan, Kashmir
------	--------------------------------

<b>Treatments (Suggested procedures)</b>
------------------------------------------

Fresh seed germinates readily. Older seed germinates well with 30 days cold stratification. Seed can germinate in 10 - 14 days at 65 - 70°.

<b>Collection Timing and Strategies</b>
-----------------------------------------

<b>Cultural Information</b>
-----------------------------

<b>Greenhouse conditions</b>
------------------------------

Very adaptable to moist or dry growing conditions. Monthly fungicide drenches can help to prevent damping off.

<b>Garden conditions</b>
--------------------------

Plant in fertile soil in full sun. Can be planted in part shade but flowering will be diminished.

<b>Other Expert Advice</b>
----------------------------

This plant gets taller with more water but will not take a constantly wet soil. If cut back it will re-bloom. Requires vernalization to bloom.
