

Plant Name	Scientific	Common	Family
-------------------	------------	--------	--------

<i>Salvia daghestanica</i>		PLATINUM [®] Sage	Lamiaceae
----------------------------	--	-----------------------------------	-----------

Propagation Method	Native To
---------------------------	------------------

Cutting or seed	Caucasus Mountains
-----------------	--------------------

Treatments (Suggested procedures)
--

Limited experience suggests 30 days cold stratification for seeds, and cover lightly. For cuttings use a talc of a 1:15 liquid rooting hormone. No intermittent mist is needed, after cuttings are stuck place under row cover and hand water to keep moist.

Collection Timing and Strategies

cuttings should be taken from non flowering shoots while plant is actively growing.

Cultural Information

Greenhouse conditions

Avoid excessive amounts of water and be cautious of water sitting on foliage for extended periods of time.

Garden conditions

Prefers full sun, can tolerate partial shade. Need a dry or well drained soil.

Other expert Advice

Plants can also be divided from in ground stock plants. Plants can be slow growing so it could take several years in the garden to get large numbers for divisions.
