

<b>Plant Name</b>	<b>Scientific</b>	<b>Common</b>	<b>Family</b>
-------------------	-------------------	---------------	---------------

<i>Sibiraea laevigata</i>		Siberian Spirea	Rosaceae
---------------------------	--	-----------------	----------

<b>Propagation Method</b>	<b>Native to</b>
---------------------------	------------------

seed	Siberia
------	---------

<b>Treatments (Suggested procedures)</b>
--

April; No stratification required. Sow the tiny seeds thinly in flats and cover very lightly. Hold one year in seed flat before transplanting.

<b>Collection Timing and Strategies</b>
---

Collect seed from female plants in July before capsules open and wind disperses seed. Seed orchard needs both sexes to produce viable seed.

<b>Cultural Information</b>
-----------------------------

<b>Greenhouse conditions</b>
------------------------------

This plant is prone to water mold diseases when grown in containers.
