

Plant Name	Scientific	Common	Family	Date reviewed 10/2022
	<i>Diascia integerrima</i> 'P009S'	CORAL CANYON twinspur	Scrophulariaceae	
Propagation Method	Native to			
Cuttings	S. Africa			
Treatments (Suggested procedures)				
Take 2-3" cuttings from non-flowering stems. Use a rooting hormone and stick into a perlite/peat medium. Bottom heat and mist are beneficial. Cuttings should root within 10 days.				
Collection Timing and Strategies				
Spring is the best time for cuttings, but those taken in summer and fall will also root.
