

Plant Name	Scientific	Common	Family	Date reviewed 10/2022
	<i>Globularia stygia</i>	Globe Daisy	Plantaginaceae	
Propagation Method	Native to			
Cuttings, seed	North central Greece			
Treatments (Suggested procedures)				
<p>Easy to propagate from cuttings. Take softwood cuttings on non-blooming plants, remove lower leaves and dip into rooting hormone. We use Hormodin 2 powder. Cuttings are placed in a moist mixture of 2 parts perlite to 1 part bagged sterile soil mix (peat and perlite), under intermittent mist. Bottom heat helps promote rooting, but is not absolutely necessary.</p>
