

Plant Name	Scientific	Common	Family
Agastache cana 'Sinning' PP13,673		SONORAN SUNSET® Hyssop	Lamiaceae
Propagation Method		Native to	
Cuttings		NM, TX	
Treatments (Suggested procedures)			
Cuttings should be about 2" and taken from non-flowering stems. Use a 1:10 rooting hormone, and put plants under intermittent mist until root development begins.			
Collection Timing and Strategies			
Take cutting on non-flowering terminals, easier in short days			
Cultural Information			
Greenhouse conditions			
Start at 70F and 70% humidity, will typically callus in 2 weeks. Gradually, reduce humidity and temperature. Fertilizer levels should be medium. Normally, pinch plants between day 21 to 28.			
Garden conditions			
Prefers full sun. Medium moisture			
Other Expert Advice			
Florel at 500ppm will help reduce buds and blooms and promote more lateral growth.
