

Plant Name	Scientific	Common	Family	Date Reviewed 03/24/20
------------	------------	--------	--------	------------------------

<i>Anchusa capensis</i>		Cape bugloss	Boraginaceae	
-------------------------	--	--------------	------------------------------	--

Propagation Method	Native to
--------------------	-----------

Seed	South Africa
------	--------------

Treatments (Suggested procedures)

Seed will germinate without cold pretreatment. I prefer to cover seed with vermiculite

Collection Timing and Strategies

Please by seed from a reputable Plant Select® seed producer member. Seeds ripen starting in late July and continue through September

Cultural Information

Greenhouse conditions

These fuzzy little plants do not like to have water setting on the leaves. During the seedling phase keep as dry as possible to prevent rot and fungal problems.

Garden conditions

Adaptable to a wide range of conditions in the greenhouse

Other Expert Advice

Weekly Zero-Tol treatments helps prevent damping off. I try to keep plants near to moving air to keep water off of the foliage. I also prefer to add perlite to a standard mix to give the plants plenty of oxygen space in the root zone.
