Andropogon gerardii 'PWIN01S'		WINDWALKER® big bluestem	Poaceae	
-------------------------------	--	--------------------------	-------------------------	--

Propagation Method	Native to
--------------------	-----------

Division	North America
----------	---------------

Treatments (Suggested procedures)

Divide root culms in late June through August. Cut back tops to 6" or so. Keep divisions under night break lighting.

Collection Timing and Strategies

Late June through August.

Cultural Information

Greenhouse conditions

Keep stock plants under 4 hrs night break lighting from July 1. Plant single culms in 2.5" pots in regular greenhouse soil. Place in part shade in the greenhouse until new growth resumes (2-3 weeks) then move to sun. Keep relatively warm 60-80° until rooted

Garden conditions

Feed low rate nitrogen to encourage quick establishment (150-250 ppm N.)

Other Expert Advice

Vernalize at 30-40° F for several months to break dormancy.
