

Plant Name	Scientific	Common	Family	Date Reviewed 03/24/20
Berlandiera lyrata		Chocolate Flower	Asteraceae	
Propagation Method		Native to		
Seed		CO, TX, NM, AZ, OK, NE		
Treatments (Suggested procedures)				
Germination occurs in about 2 - 3 days in a greenhouse with 75° days and 60° nights.				
Collection Timing and Strategies				
Cultural Information				
Greenhouse conditions				
Plants tolerate a wide range of conditions but will stay more compact when allowed to dry out between waterings.				
Garden conditions				
Grows well in full sun and xeric conditions. Has been seen growing in the wild on sandy road-sides with cacti. The drier the setting, the more compact the plant. Additional water can result in leggy plants. Combines well with shorter native grasses where the plant can sprawl and dot the garden with its chocolate fragrance and bright-yellow flowers.
