

Plant Name	Scientific	Common	Family	Date Reviewed 03/24/20
<i>Calamagrostis brachytricha</i>		Korean Feather Reed Grass	Poaceae	
Propagation Method		Native to		
Seed		Eastern Asia		
Treatments (Suggested procedures)				
Requires no pretreatments. Seed should be covered. Seed will start to germinate in 6-8 days.				
Collection Timing and Strategies				
Seed is ready to collect by late October to early November. Collecting while slightly green does not affect viability if seed is allowed to dry before being placed in storage.				
Cultural Information				
Greenhouse conditions				
Easy to grow and tolerant of most greenhouse conditions.				
Garden conditions				
Adaptable to a broad range of soil conditions. Can be grown in full sun to partial shade, but will require more water if grown in full sun.				
Other Expert Advice				
Cut back in late winter.
