<b>Propagation Method</b>		<b>Native to</b>		
Seed		New Mexico		
<b>Treatments (Suggested procedures)</b>				
Seed requires no pretreatment. It is a light germinator, and should not be covered. Seed germinates in 6-8 days under intermittent mist in a heated greenhouse. Remove plug trays from mist about 2 weeks after seed is sown. Tiny seedlings are dislodged easily, so avoid overhead watering. Subirrigate plugs by filling a plastic storage bin with water to a depth equal to half the height of the plug tray. Submerge the plug tray in the bin for 10-15 seconds. Capillary action will draw water through the drain holes to the surface of the plug without disturbing the				
<b>Collection Timing and Strategies</b>				
<b>Cultural Information</b>				
<b>Greenhouse conditions</b>				
Plants should be grown in a well-drained medium maintained at moderate moisture levels. Feed weekly with a well-balanced fertilizer containing 150-200 ppm Nitrogen.				
<b>Garden conditions</b>				
Best grown in sun to partial shade on well-drained soils. Pink flowers bloom in mid-summer.
