

Plant Name	Scientific	Common	Family	Date Reviewed 03/24/20
Phlomis cashmeriana		Cashmere Sage	Lamiaceae	
Propagation Method		Native to		
Seed		Afghanistan, Pakistan, Kashmir		
Treatments (Suggested procedures)				
Fresh seed germinates readily. Older seed germinates well with 30 days cold stratification. Seed can germinate in 10 - 14 days at 65 - 70°.				
Collection Timing and Strategies				
Cultural Information				
Greenhouse conditions				
Very adaptable to moist or dry growing conditions. Monthly fungicide drenches can help to prevent damping off.				
Garden conditions				
Plant in fertile soil in full sun. Can be planted in part shade but flowering will be diminished.				
Other Expert Advice				
This plant gets taller with more water but will not take a constantly wet soil. If cut back it will re-bloom. Requires vernalization to bloom.
