

Plant Name	Scientific	Common	Family CSU Updated 03/25/20
Pterocephalus depressus		Moroccan Pincushion Flower	Caprifoliaceae
Propagation Method		Native to	
Division or seed		Morocco	
Treatments (Suggested procedures)			
<p>Vegetative cuttings 2-3" long. Dip-n-Grow 500 ppm IBA total submersion quick dip. Misting 10 sec duration every 15 minutes for week 1, every 30 minutes week 2, and every 60 minutes week 3-4. **make sure to get out of mist once you see the rooting in the majority of the plants.**</p> <p>I am getting about 95-100% rooting on all the different treatments I applied, so its an easily rooted plant.</p>			
Collection Timing and Strategies			
Seed can be collected and used. Not sure about dormancy issues.			
Cultural Information			
Greenhouse conditions			
Keep in well ventilated area, don't over water, will rot.
