

Plant Name	Scientific	Common	Family	Date Reviewed 03/24/20
Sedum sediforme		Turquoise Tails blue sedum	Crassulaceae	
Propagation Method		Native to		
		Mediterranean region		
Treatments (Suggested procedures)				
<p>Direct stick 3 cuttings per 3.5" pot. No hormone. Keep slightly moist in a 65 degree greenhouse for 10-14 days then are moved to a cool house (52 degrees day, 45 degrees night) to finish (about 6-8 weeks).</p>				
Collection Timing and Strategies				
<p>Keep stock in a cold green house and cut off of them between Sept and April. In the summer months they go into flower, making them less cuttable.</p>

Other Expert Advice				
<p>If kept in a warm house they will become ungainly and unattractive. The key to a good finish is slow and cold.</p>
