

Plant Name	Scientific	Common	Family	Date Reviewed 03/24/20
Sibiraea laevigata		Siberian Spirea	Rosaceae	
Propagation Method		Native to		
seed		Siberia		
Treatments (Suggested procedures)				
April; No stratification required. Sow the tiny seeds thinly in flats and cover very lightly. Hold one year in seed flat before transplanting.				
Collection Timing and Strategies				
Collect seed from female plants in July before capsules open and wind disperses seed. Seed orchard needs both sexes to produce viable seed.				
Cultural Information				
Greenhouse conditions				
This plant is prone to water mold diseases when grown in containers.				
Garden conditions				
Other Expert Advice				
Female flowers have a pleasant fragrance.
