

Plant Name	Scientific	Common	Family	Date Reviewed 03/24/20
<a href="#">Verbena bipinnatifida syn. Glandularia bipinnatifida</a>		VALLEY LAVENDER® Verbena	<a href="#">Verbenaceae</a>	
Propagation Method		Native to		
Cutting		Colorado		
Treatments (Suggested procedures)				
Two-inch tip cuttings should be treated with a 1:10 liquid rooting hormone. Place under intermittent mist for approximately 8 days. After root initiation occurs remove from mist and keep soil evenly moist until rooting has finished.				
Collection Timing and Strategies				
Cuttings can be harvested any time plant is actively growing. Remove inflorescence from cutting material.				
Cultural Information				
Greenhouse conditions				
Plants are adaptable to a wide variety of cultural conditions. Excess water can cause leaching of nutrients and susceptibility to water-borne diseases.				
Garden conditions				
Best grown in full sun in areas that don't stay wet for extended periods of time.				
Other Expert Advice				
In greenhouse conditions plants can be susceptible to whitefly and spider mites.
