

Plant Name	Scientific	Common	Family
Veronica 'Reavis'		CRYSTAL RIVERS® Veronica	Plantaginaceae
Propagation Method		Native to	
Cuttings		Garden hybrid	
Treatments (Suggested procedures)			
Cuttings should be 1 - 2" in length. Spray a liquid rooting hormone on plants at a 1:20 concentration.			
Collection Timing and Strategies			
Cuttings can be taken anytime the plants are actively growing.			
Cultural Information			
Greenhouse conditions			
Adaptable to most growing regimes.			
Garden conditions			
Plants require some additional irrigation for optimal performance.			
Other Expert Advice			
Flowers do not affect rooting. Plants need a yearly cold period for optimal blooming. Mostly pest and disease free. Shear plants at least once during the growing cycle to produce well branched plants.
