

Plant Name	Scientific	Common	Family	Date Reviewed 03/24/20
Xanthoceras sorbifolium 'Psgan'		CLEAR CREEK® Golden Yellowhorn	Sapindaceae	
Propagation Method		Native to		
Seed		North of Qin Ling Shan, China		
Treatments (Suggested procedures)				
Float to remove any hollow seeds. Give at least 30 days cold moist stratification or sow in outdoor seedbeds in the fall.				
Collection Timing and Strategies				
Seeds are borne in a tennis ball sized three chambered fruit. The seed inside the pod are the size of small grapes and are black. Seed matures in late July.				
Cultural Information				
Greenhouse conditions				
Use a well drained media and be cautious of over watering. Too much fertilizer can make for weak leggy plants. Indoors peach mealybug can be a problem				
Garden conditions				
Plant in full sun and in a well drained soil. Very tolerant of alkaline soils.				
Other Expert Advice				
Grows in full sun to part shade with xeric moisture. Can reach height of 20'. Flowers appear in May. Grows best in zones 4-9. Quite cold-hardy and prefers rich warm loam.
