

Plant Name	Scientific	Common	Family	Date reviewed 10/2022
<i>Sideritis syriaca</i> 'P024S'		Sarada's Silver Lining Mountain Tea	Lamiaceae	
Propagation Method		Native to		
Cuttings				
Treatments (Suggested procedures)				
Take cuttings of about 2-3 inches, remove leaves from lower 3/4s of the stem and dip into rooting hormone. We use Hormodin 2 powder. Cuttings are placed in a moist mixture of 2 parts Perlite to 1 part bagged sterile soil mix (peat and perlite). Bottom heat helps promote rooting, but is not absolutely necessary.				
Collection Timing and Strategies				
Cultural Information				
Greenhouse conditions				
Does not like water standing on fuzzy leaves. Water early in day so leaves dry before evening.
