

| Plant Name | Scientific | Common | Family | Date reviewed 10/2022 |
|---|----------------------------------|-----------------|---------------------------|-----------------------|
| | <i>Scutellaria suffrutescens</i> | Cherry skullcap | Lamiaceae | |
| Propagation Method | Native to | | | |
| seed, cuttings | NE Mexico | | | |
| Treatments (Suggested procedures) | | | | |
| Cover lightly, keep moist and at about 68F. Seed can germinate somewhat irregularly. Alternatively, take tip cuttings from non-flowering stems or remove flowers, strip lower leaves and stick into media heavily amended with perlite. | | | | |
| Timing | | | | |
| Cuttings can be taken any time the plant is actively growing. | | | | |
