

Plant Name	Scientific	Common	Family
<i>Shepherdia argentea</i> 'Totem'		SILVER TOTEM™ buffaloberry	Elaeagnaceae
Propagation Method		Native to	
Cuttings		Colorado and New Mexico	
Treatments (Suggested procedures)			
Take tip cuttings and strip leaves from lower half. Give basal quick dip in 1:10 Dip'n Grow. Stick cuttings in rooting medium in F-32 pots and place under intermittent mist. Use light mist nozzles on boom running at 70 fpm spraying one direction only every 10 minutes. Cuttings will start to root after 10 days.			
Collection Timing and Strategies			
Second week of June			
Cultural Information:			
Greenhouse conditions			
Maintain at 65/75° F daytime and 68/75° F nighttime temperatures.			
Garden conditions			
Full sun and low water.
